Summary

ML Engineer focused on building and deploying machine learning models in Python, with hands-on experience across the full model lifecycle.

Work History

Senior ML Engineer, Hollowbrook Energy
08/2023 - Present
- Deployed TensorFlow models to production behind a REST API with automated retraining on a schedule.
- Partnered with product managers to translate business goals into measurable model objectives.
- Built data pipelines in Python to preprocess and validate training data at scale.
- Built systems that let machines interpret and classify photographs for a quality-inspection product.

ML Engineer, Lumen Data Labs
08/2018 - 08/2023
- Deployed TensorFlow models to production behind a REST API with automated retraining on a schedule.
- Partnered with product managers to translate business goals into measurable model objectives.
- Built data pipelines in Python to preprocess and validate training data at scale.

Junior ML Engineer, Fern Analytics
10/2015 - 08/2018
- Used Scikit-learn to prototype and compare classical ML baselines before committing to a deep learning approach.
- Built data pipelines in Python to preprocess and validate training data at scale.
- Built systems that let machines interpret and classify photographs for a quality-inspection product.

EDUCATION

M.S. in Computer Science, Cedar Tech Institute

SKILLS: Python, Machine Learning, Deep Learning, TensorFlow, PyTorch, Scikit-learn

Projects

- Built an end-to-end fraud-detection pipeline, from feature engineering to a deployed PyTorch model.
- Trained a transformer-based text classifier and published the model card internally for reuse.

Certifications

- TensorFlow Developer Certificate
- AWS Certified Machine Learning - Specialty
